6. RISK ANALYSIS

High Risk Factors:

• Volatility in raw material prices for glass and polymers

• Energy price fluctuations in high-consumption manufacturing

• Scarcity of specialized Industry 5.0 technical labor

• Rapid technological obsolescence of robotic systems

Mitigation Strategies:

• Long-term fixed-price energy contracts and onsite solar integration

• Implementation of a predictive maintenance program to extend asset life

• Establishment of an internal technical training academy

• Diversification of supplier base for critical consumables

Sensitivity Analysis:

• 15% increase in energy costs: Reduction of NPV by 4.2% and extension of payback period by 0.3 years

• 10% decrease in market demand: Reduction of IRR to 14.8% and delayed break-even by 1.1 years

7. CONCLUSION

This comprehensive TCO analysis shows a total investment of €440,000,000 with annual operating costs of €210,000,000. The project demonstrates a 2.5% ROI with a payback period of 4.2 years. The financial projections indicate positive cash flow and sustainable growth over the 10-year period.
